

## **SYNTECHTURF WARRANTY, CARE AND MAINTENANCE PROCEDURE**

Your SYNTECHTURF represents a significant investment of money. By following these care and maintenance guidelines, you can help protect your investment and extend the useful life of your SYNTECHTURF

The maintenance program that accompanies the synthetic turf system installation requires the turf contractor to maintain the synthetic turf in good working order. SYNTECHTURF has a limited warranty against poor workmanship or product or manufacturer's defect for 2 years.

The following procedures are key in helping to preserving your turf.

- **Keep it clean**
- **Brush periodically**
- **Do not abuse**

### **1 Keep it clean**

#### **A) Dust, pollen, and airborne pollutants**

Rainfall is the best cleanser. In areas where rainfall is scarce, an occasional water flash is beneficial to cleanse the turf. For lightly soiled areas it may be necessary to sponge mop with a five (5) percent solution of low sudsing household detergent in hot water followed by a thorough rinsing with warm water. For heavily soiled areas, repeat procedure for lightly soiled areas follow with sponge mopping using a three (3) percent solution of household ammonia in warm water followed by a thorough rinsing with warm water.

#### **B) Stains and other blemishes**

The first rule is promptness. It is always easier to clean up a fresh spill than one that has dried and hardened. Remove any solid or paste-like deposit with a spatula or table knife. Blot up excess liquids with paper towel, a clean cloth, or a dry absorbent, such as kitty litter or fuller's earth. Dry absorbents can then be swept or vacuumed up afterwards. Do not use cleaners that contain chlorine bleaches (ph above 9) or acidic cleaner (Ph below 5) Rinse area thoroughly with clean warm water

#### **C) Animal Waste, Fungus**

Neutralise with mixture with white distilled vinegar in an equal amount of water  
Flush thoroughly with water after application

## **2 Periodic Brushing**

Matting of fibres may occur in high traffic areas especially if fibres become heavily soiled with dirt and airborne pollutants. Periodic cross brushing of the turf can help restore the aesthetic appearance of the turf. Cross brushing means brush against the grain or sweep the turf fibres. Fluff up the fibres, brush against the turf. A brush with synthetic bristles should be used.

## **3 Do not abuse**

Although SYNTECHTURF is made of tough, durable fibres, certain precaution should be taken to prevent damage to the turf.

- Cigarettes, fireworks and open flames should be kept away from the turf.
- Furniture or equipment with sharp or jagged edges should not be placed on the turf as this may puncture or tear the turf.
- Never leave a car parked or idling on the turf
- Cap off or remove sprinkler head if any, water from sprinkler systems may leave mineral deposits on turf that may cause discolouration.

**Proper care and maintenance program can enhance the aging, usefulness and aesthetics of your SYNTECHTURF**
